Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 07 February 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Claim Objections

1. Claim 1 is objected to because of the following informalities:

The phrase "In a medical device system having a plurality of monitoring elements" makes the claim indefinite as to whether the claim is directed to an apparatus/system or a method. The Examiner suggests omitting this phrase. Appropriate correction is required.

Priority

2. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in PCT on 15 October 2003. It is noted, however, that applicant has not filed a certified copy of the PCT application as required by 35 U.S.C. 119(b).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 3735

3. Claims 1-18 are rejected under 35 U.S.C. 102(e) as being anticipated by Gallant et al, US 6,730,038 B2 ("Gallant").

Claims 1-18: Gallant teaches a method, comprising: receiving a first neurological signal (tonometric pressure waveform) from a monitoring element and a second neurological signal (heart rate signal or other non-indigenous measurement technique) from a second monitoring element (see col. 15, lines 36-46); processing the first neurological signal to generate a plurality of data points for the first neurological signal in a moving time window, and detecting whether the first neurological signal has poor signal quality by determining that an amount of the data points exhibiting poor signal quality within the moving time window has exceeded a predetermined threshold (see col. 15, lines 58-67); if the first neurological signal has poor signal quality, ignoring the first neurological signal experiencing poor signal quality in signal processing (see col. 15, lines 64-67); and if the first neurological does not have poor signal quality, performing sampling the first and second neurological signals at different time instances resulting in a time shift between the first and second neurological signal samples, and time shifting signal samples of the second neurological signal to correct for the time shift so the second neurological signal is synchronized with the first neurological signal (see col. 15, line 64 to col. 16, lines 22).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 3735

US 5,813,993 A additionally teaches the subject matter of the Applicant's claims. The Examiner suggests reviewing these patents before responding to the present Office Action.
